

Group 3 - Social Square

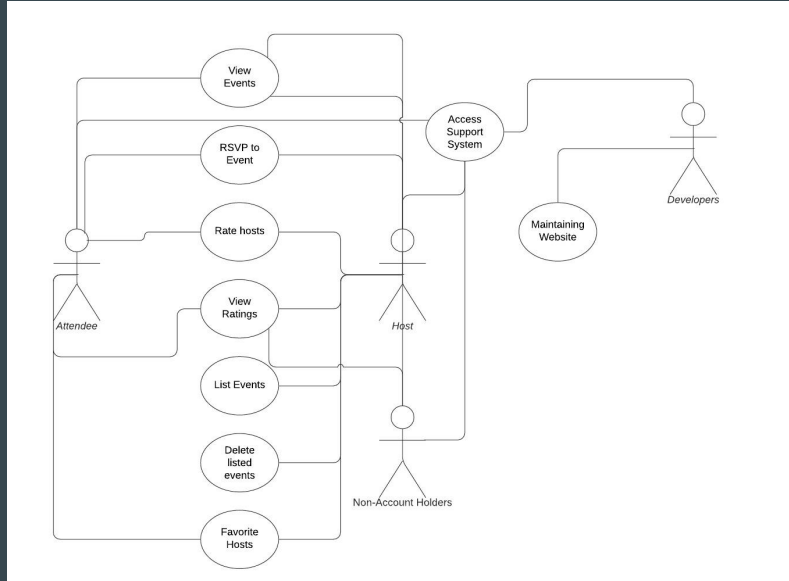

Monika Beckham, Ryan Demboski, Brett Lewerke, Shayne Sellner, Ryan Mason, Connor Mayon
https://github.com/rdemboski/cs386_Group3

Project Motivation

- Problem: Hard to find safe and fun events
- Value Proposition: SocialSquare is an event planning website that allows young adults and more to plan and attend events, with the addition of a rating system that allows users to make informed choices.
- Create a service relevant for a demographic we're familiar with.
 - A problem we personally identified with that we could solve.
- Initial interviews generally validated our ideas.

Design and Implementation

Social Square

Listing Events in this Area
Code: '#####'

Sort By

Event Title	Event Description	Event Location, Date/Time:

Languages

Demo Video (From Deliverable 6)

Evaluation

- Ratings system was a highly anticipated feature.
- UI definitely a big factor.
 - Some users felt the design wasn't as “snappy” as competitors.
- Current simplicity was not an advantage.

Conclusion

Main Issues:

- Time management
- Work delegation
- Coordination!!!

Takeaways:

- Working with APIs like ASP.NET MVC, learning unfamiliar languages and libraries.
- Better understanding of what sort of technologies we may want to use in future projects.
- Better understanding of the team dynamic, especially when working on a big project.
- Importance and difficulty of good design.
